# SECTION 4 ALTERNATIVES SUMMARY

#### 4.1 INTRODUCTION

This chapter presents a summary comparison of the overall potential environmental impacts of the Proposed Action and Alternative Regulatory Actions. Chapter 3 addresses the individual impacts associated with each separate proposed and alternative regulatory change, including the No Action alternative. Cumulative impacts are also presented in Chapter 3.

The alternatives, as described in Chapter 2, are the Proposed Action, the Alternative Regulatory Actions, and No Action. No Action may best be described as the continuation of existing management activities and regulatory structure (see Section 2.3 for additional details of the No Action alternative).

# 4.2 IMPACT SUMMARY

# 4.2.1 The Proposed Action

Table 4-1 provides an overview of the expected environmental impacts from each regulatory change associated with the Proposed Action under the JMPR. Most of the regulatory changes proposed by NOAA result in beneficial impacts on resources within the ROI. Those changes that result in adverse impacts primarily involve regulatory burdens on human uses within the sanctuaries, such as commercial fisheries, marine transportation, or recreation.

No significant adverse impacts were identified.

Less than significant adverse impacts were identified in Commercial Fisheries, Land Use and Development, Marine Transportation, Public Access and Recreation, and Socioeconomics.

Beneficial impacts were identified in Air Quality, Biological Resources, Ocean/Geological Resources, Water Quality, Commercial Fisheries, Cultural Resources, Hazardous Materials, Land Use and Development, Marine Transportation, Public Access and Recreation, Research and Education, Socioeconomics, and Visual Resources.

## Notes:

O – No impact

+ - Beneficial impact

O – Less than significant adverse impact

○ – Significant mitigable impact
 ● – Significant unavoidable impact

CC – Cross-Cutting Regulation

CB – Cordell Bank NMS

GF – Gulf of the Farallones NMS

MB – Monterey Bay NMS

Cumulatively adverse impacts were identified in Commercial Fisheries and Marine Transportation; cumulative beneficial impacts were identified in Air Quality, Biological Resources, Ocean/Geology, Water Quality, Commercial Fisheries, Cultural Resources, Hazardous Materials, Public Access and Recreation, Research and Education, Socioeconomics, and Visual Resources.

## 4.2.2 Alternative Regulatory Actions

Table 4-2 summarizes environmental impacts associated with the Alternative Regulatory Actions. As noted in Chapter 2, there are not alternatives for each individual proposed regulatory change. The alternatives would result in similar impacts as discussed under the Proposed Action, with minor differences that are noted in Chapter 3. One significant adverse impact was identified on Public Access and Recreation in MBNMS, as a result of the preemption of the use of MPWC throughout the entire Sanctuary. This impact could be mitigated by providing for special use permits for competitions and training at Mavericks.

The Alternative Regulatory Actions would result in less than significant adverse impacts on Commercial Fisheries, Marine Transportation, Public Access and Recreation, and Socioeconomics; and beneficial impacts on Air Quality, Biological Resources, Ocean/Geology, Water Quality, Commercial Fisheries, Cultural Resources, Hazardous Materials, Public Access and Recreation, Research and Education, Socioeconomics, and Visual Resources.

Cumulative adverse impacts associated with the alternatives were identified in Commercial Fisheries and Marine Transportation, and cumulative beneficial impacts were identified in Air Quality, Biological Resources, Ocean/Geology, Water Quality, Commercial Fisheries, Cultural Resources, Hazardous Materials, Public Access and Recreation, Research and Education, Socioeconomics, and Visual Resources.

#### 4.2.3 The No Action Alternative

Table 4-3 summarizes impacts associated with No Action. Failure to implement the Proposed Action is generally considered to have minimal impact on resources within the ROI. Implementation of the No Action alternative would result in less than significant adverse impacts on Biological Resources (resulting from the water quality impact, continued impacts on white sharks in GFNMS, and continued MPWC use in MBNMS) and less than significant adverse impacts on Water Quality (from continued discharge into the sanctuaries). No cumulative impacts were identified under No Action.
